

Vartek is a manufacturer of PVC Flexible Hose and Tubing. Though the company history is relatively young, as it was established in 2005, the owners and employees bring forth years of manufacturing experience in hose and tubing extrusion, both reinforced and non-reinforced products manufactured from PVC, PE, PU, TPR, Rubber, etc. The markets our extruded products currently serve are Construction, Electrical, Industrial, Irrigation, Landscape, Marine, Medical, Pool & Spa. Most of our PVC Hose's and Tubing's are readily available in our warehouses located in Tampa, Florida; Portland, OR and San Diego, CA areas. We sell our products in North America as well as export our products all over the world. Aside from our commodity products, we also work closely with our customers to custom design products that require a particular size, certification, construction and material.

State of the art equipment in our production facility allows us to maintain our exacting quality. We monitor all aspects of helical reinforced PVC hoses, such as OD, ID, Wall, Helical shape and dimensions, etc. Our non-reinforced tubing's are measured for concentricity, ID, OD, Wall, etc. We maintain the tightest tolerances in the industries we serve. We package all of our products to be ready for use upon arrival, but we can also meet most packaging requirements such as custom lengths, boxed products, wrapped coils, etc. all based on our customers needs and desires.

We believe that quality is never an accident. It is always the result of high intention, sincere effort, intelligent direction and skillful execution.
